the rest of the application but provides only necessary details about the error. For a minimal API application, that response could be JSON or plain text, as shown in figure 4.16.

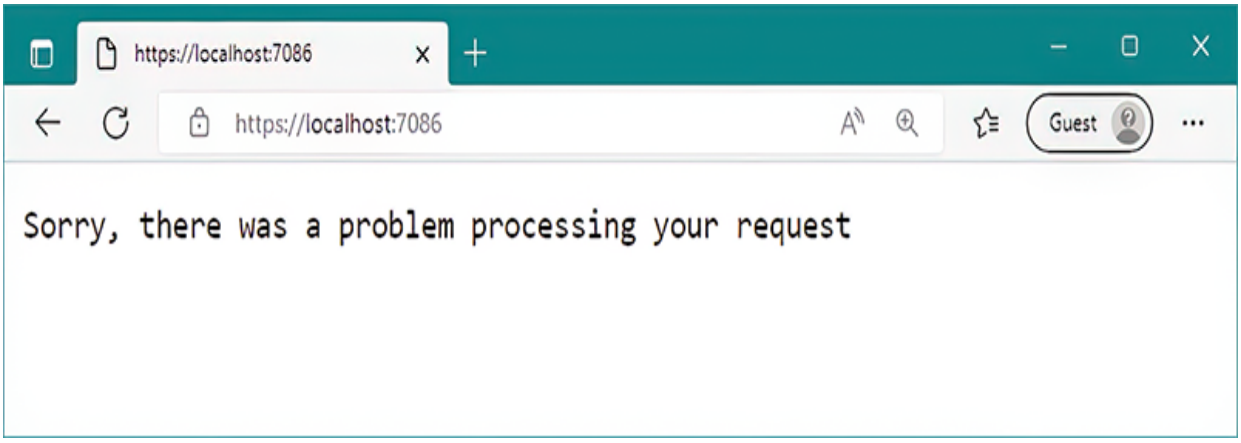

Figure 4.16 Using the `ExceptionHandlerMiddleware`, you can return a generic error message when an exception occurs, ensuring that you don't leak any sensitive details about your application in production.

For Razor Pages apps, you can create a custom error response, such as the one shown in figure 4.17. You maintain the look and feel of the application by using the same header, displaying the currently logged-in user, and displaying an appropriate message to the user instead of full details on the exception.
