❽ After adding or replacing the fruit, returns a 204 No Content response

❾ After deleting the fruit, always returns a 204 No Content response

Listing 5.3 demonstrates several status codes, some of which you may not be familiar with:

- `200 OK`—The standard successful response. It often includes content in the body of the response but doesn't have to.
- `201 Created`—Often returned when you successfully created an entity on the server. The `Created` result in listing 5.3 also includes a `Location` header to describe the URL where the entity can be found, as well as the JSON entity itself in the body of the response.
- `204 No Content`—Similar to a 200 response but without any content in the response body.
- `400 Bad Request`—Indicates that the request was invalid in some way; often used to indicate data validation failures.
- `404 Not Found`—Indicates that the requested entity could not be found.

These status codes more accurately describe your API and can make an API easier to use. That said, if you use only `200 OK` responses for all your successful responses, few people will mind or think less of you! You can see a summary of all the possible status codes and their expected uses at http://mng.bz/jP4x.

NOTE The `404` status code in particular causes endless debate in online forums. Should it be *only* used if the request didn't match an endpoint? Is it
