

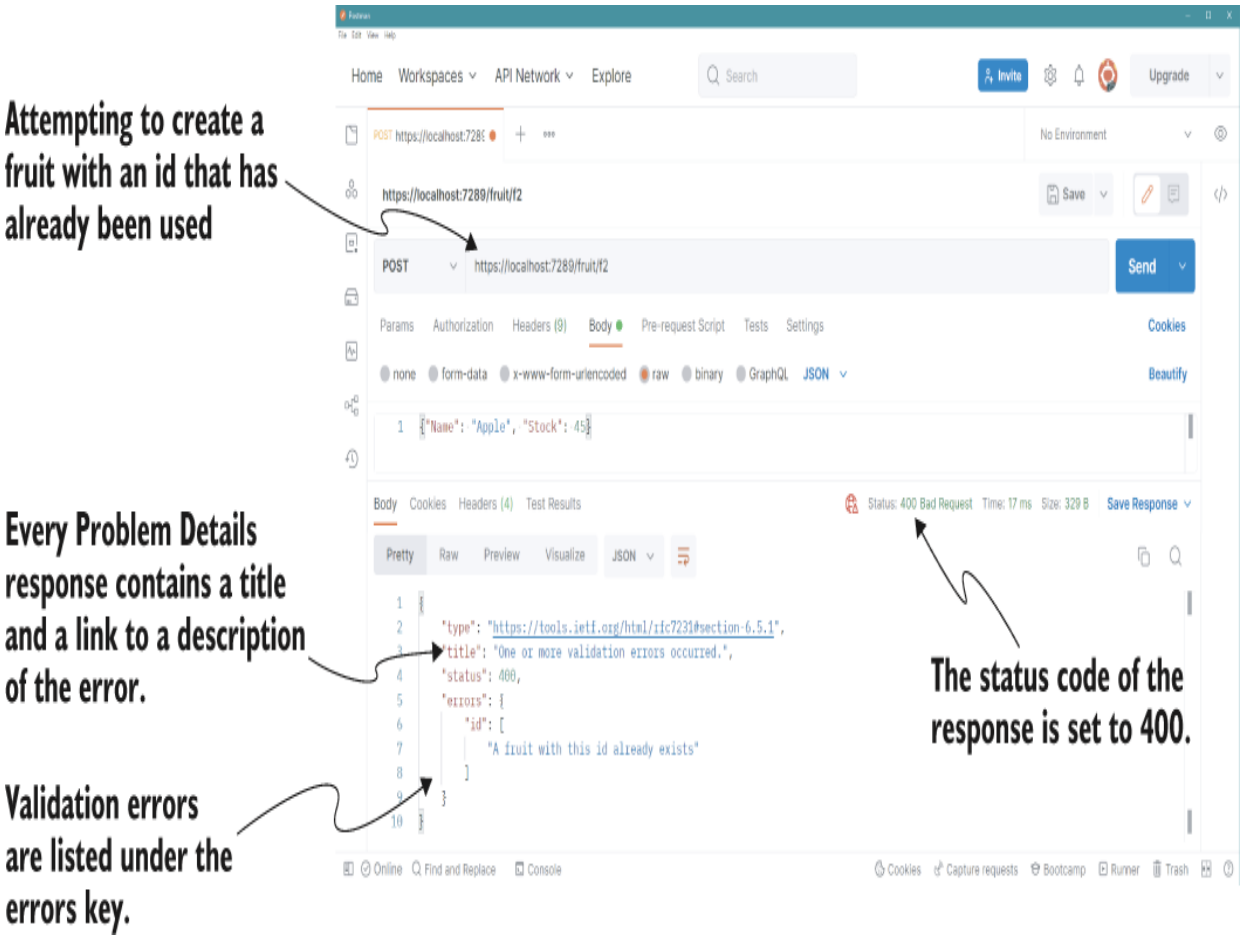

Figure 5.5 You can return a Problem Details response by using the `Problem` and `ValidationProblem` methods. The `ValidationProblem` response shown here includes a description of the error, along with the validation errors in a standard format. This example shows the response when you try to create a fruit with an `id` that has already been used.

Deciding on an error format is an important step whenever you create an API, and as Problem Details is already a web standard, it should be your go-to approach, especially for validation errors. Next, you'll learn how to ensure that all your error responses are Problem Details.
