Creating the project from a template

Exploring the template in Solution Explorer

The ASP.NET Core Identity data model

Interacting with ASP.NET Core Identity

23.4 Adding ASP.NET Core Identity to an existing project

Configuring the ASP.NET Core Identity services

Updating the EF Core data model to support Identity

Updating the Razor views to link to the Identity UI

23.5 Customizing a page in ASP.NET Core Identity's default UI

23.6 Managing users: Adding custom data to users

24 Authorization: Securing your application

24.1 Introduction to authorization

24.2 Authorization in ASP.NET Core

Preventing anonymous users from accessing your application

Handling unauthorized requests

24.3 Using policies for claims-based authorization

24.4 Creating custom policies for authorization

Requirements and handlers: The building blocks of a policy

Creating a policy with a custom requirement and handler

24.5 Controlling access with resource-based authorization

Manually authorizing requests with IAuthorizationService

Creating a resource-based AuthorizationHandler

24.6 Hiding HTML elements from unauthorized users

25 Authentication and authorization for APIs

25.1 Authentication for APIs and distributed applications

Extending authentication to multiple apps

Centralizing authentication in an identity provider

OpenID Connect and OAuth 2.

25.2 Understanding bearer token authentication
