25.3 Adding JWT bearer authentication to minimal APIs

25.4 Using the user-jwts tool for local JWT testing

Creating JWTs with the user-jwts tool

Customizing your JWTs

Managing your local JWTs

25.5 Describing your authentication requirements to OpenAPI

25.6 Applying authorization policies to minimal API endpoints

26 Monitoring and troubleshooting errors with logging

26.1 Using logging effectively in a production app

Highlighting problems using custom log messages

The ASP.NET Core logging abstractions

26.2 Adding log messages to your application

Log level: How important is the log message?

Log category: Which component created the log?

Formatting messages and capturing parameter values

26.3 Controlling where logs are written using logging providers

26.4 Changing log verbosity with filtering

26.5 Structured logging: Creating searchable, useful logs

Adding a structured logging provider to your app

Using scopes to add properties to your logs

27 Publishing and deploying your application

27.1 Understanding the ASP.NET Core hosting model

Running vs. publishing an ASP.NET Core app

Choosing a deployment method for your application

27.2 Publishing your app to IIS

Configuring IIS for ASP.NET Core

Preparing and publishing your application to IIS

27.3 Hosting an application in Linux

Running an ASP.NET Core app behind a reverse proxy in Linux
