6.6, the following two URLs are equivalent:

- `/product/shoes`
- `/product/shoes/all`

Both URLs will execute the same endpoint handler, with the same route values of `category=shoes` and `name=all`. Using default values allows you to use shorter, more memorable URLs in your application for common URLs but still gives you the flexibility to match a variety of routes in a single template.

6.3.3 Adding additional constraints to route parameters

By defining whether a route parameter is required or optional and whether it has a default value, you can match a broad range of URLs with terse template syntax. Unfortunately, in some cases this approach ends up being a little too broad. Routing only matches URL segments to route parameters; it doesn't know anything about the data you're expecting those route parameters to contain. If you consider a template similar to the one in figure 6.6, `"/{category}/{name=all}/{id?}"`, all of the following URLs would match:

- `/shoes/sneakers/test`
- `/shoes/sneakers/123`
- `/Account/ChangePassword`
- `/ShoppingCart/Checkout/Start`
- `/1/2/3`
