TIP As you can see from table 6.2, you can also combine multiple constraints by separating the constraints with colons.

Using constraints allows you to narrow down the URLs that a given route template will match. When the routing middleware matches a URL to a route template, it interrogates the constraints to check that they're all valid. If they aren't valid, the route template isn't considered a match, and the endpoint won't be executed.

WARNING Don't use route constraints to validate general input, such as to check that an email address is valid. Doing so will result in `404` "Page not
