```
});

WebApplication app = builder.Build();

app.MapGet("/HealthCheck", () => Results.Ok()).WithName("healthcheck");
app.MapGet("/{name}", (string name) => name).WithName("product");

app.MapGet("/", (LinkGenerator links) =>
new []
{
    links.GetPathByName("healthcheck"),            ❸
    links.GetPathByName("product",                 ❹
        new { Name = "Big-Widget", Q = "Test"})    ❹
});

app.Run();
```

❶ Configures the RouteOptions used for link generation

❷ All the settings default to false.

❸ Returns /healthcheck/

❹ Returns /big-widget/?Q=Test

Whatever default options you choose, you should try to use them throughout your whole app, but in some cases that may not be possible. You might have a legacy API that you need to emulate, for example, and can't use lowercase URLs. In these cases, you can override the defaults by passing an optional `LinkOptions` parameter to `LinkGenerator` methods. The values you set in `LinkOptions` override the default values set in `RouteOptions`. Generating a link for the app in listing 6.4 by using

```
links.GetPathByName("healthcheck",
    options: new LinkOptions
    {
        LowercaseUrls = false,
        AppendTrailingSlash = false,
    });
```

would return the value `/HealthCheck`. Without the `LinkOptions` parameter, `GetPathByName` would return `/healthcheck/`.
