- If you try to bind to the body for an HTTP verb that usually doesn't send a body (`GET`, `HEAD`, `OPTIONS`, `DELETE`, `TRACE`, and `CONNECT`), you'll get an exception at runtime. If you change the endpoint in listing 7.3 to `MapGet` instead of `MapPost`, for example, you'll get an exception on your first request, as shown in figure 7.4.
- If you're sure that you want to bind the body of these requests, you can override the preceding behavior by applying the `[FromBody]` attribute to the handler parameter. I strongly advise against this approach, though: sending a body with `GET` requests is unusual, could confuse the consumers of your API, and is discouraged in the HTTP specification (https://www.rfc-editor.org/rfc/rfc9110#name-get).
- It's uncommon to see, but you can also apply `[FromBody]` to a simple type parameter to force it to bind to the request body instead of to the route/query string. As for complex types, the body is deserialized from JSON into your parameter.
