endpoints. To add the package, search for MinimalApis.Extensions from the NuGet Package Manager in your IDE (be sure to include prerelease versions), or run the following, using the .NET command-line interface:

```
dotnet add package MinimalApis.Extensions
```

After you've added the package, you can add validation to any of your endpoints by adding a filter using `WithParameterValidation()`, as shown in listing 7.12. After the `UserModel` is bound to the JSON body of the request, the validation filter executes as part of the filter pipeline. If the `user` parameter is valid, execution passes to the endpoint handler. If the parameter is invalid, a `400 Bad Request` Problem Details response is returned containing a description of the errors, as shown in figure 7.8.
