Microsoft has pledged to provide bug and security fixes for the older ASP.NET framework, but it won't provide any more feature updates. .NET Framework isn't being removed, so your old applications will continue to work, but you shouldn't use it for new development.

The main benefits of ASP.NET Core over the previous ASP.NET framework are

- Cross-platform development and deployment
- Focus on performance as a feature
- A simplified hosting model
- Regular releases with a shorter release cycle
- Open-source
- Modular features
- More application paradigm options
- The option to package .NET with an app when publishing for standalone deployments

As an existing .NET developer who's moving to ASP.NET Core, your ability to build and deploy cross-platform opens the door to a whole new avenue of applications, such as taking advantage of cheaper Linux virtual machine hosting in the cloud, using Docker containers for repeatable continuous integration, or writing .NET code on your Mac without needing to run a Windows virtual machine. ASP.NET Core, in combination with .NET 7, makes all this possible.

That's not to say that your experience deploying ASP.NET applications to Windows and Internet Information Services (IIS) is wasted. On the contrary, ASP.NET Core uses many of the same concepts as the previous ASP.NET
