framework, and you can still run your ASP.NET Core applications in IIS, so moving to ASP.NET Core doesn't mean starting from scratch.

1.4 How does ASP.NET Core work?

I've covered the basics of what ASP.NET Core is, what you can use it for, and why you should consider using it. In this section, you'll see how an application built with ASP.NET Core works, from a user request for a URL to the display of a page in the browser. To get there, first you'll see how an HTTP request works for any web server; then you'll see how ASP.NET Core extends the process to create dynamic web pages.

1.4.1 How does an HTTP web request work?

As you know now, ASP.NET Core is a framework for building web applications that serve data from a server. One of the most common scenarios for web developers is building a web app that you can view in a web browser. Figure 1.2 shows the high-level process you can expect from any web server.
