Swashbuckle can read this file on startup and use it to generate the OpenAPI descriptions, as shown in figure 11.11.

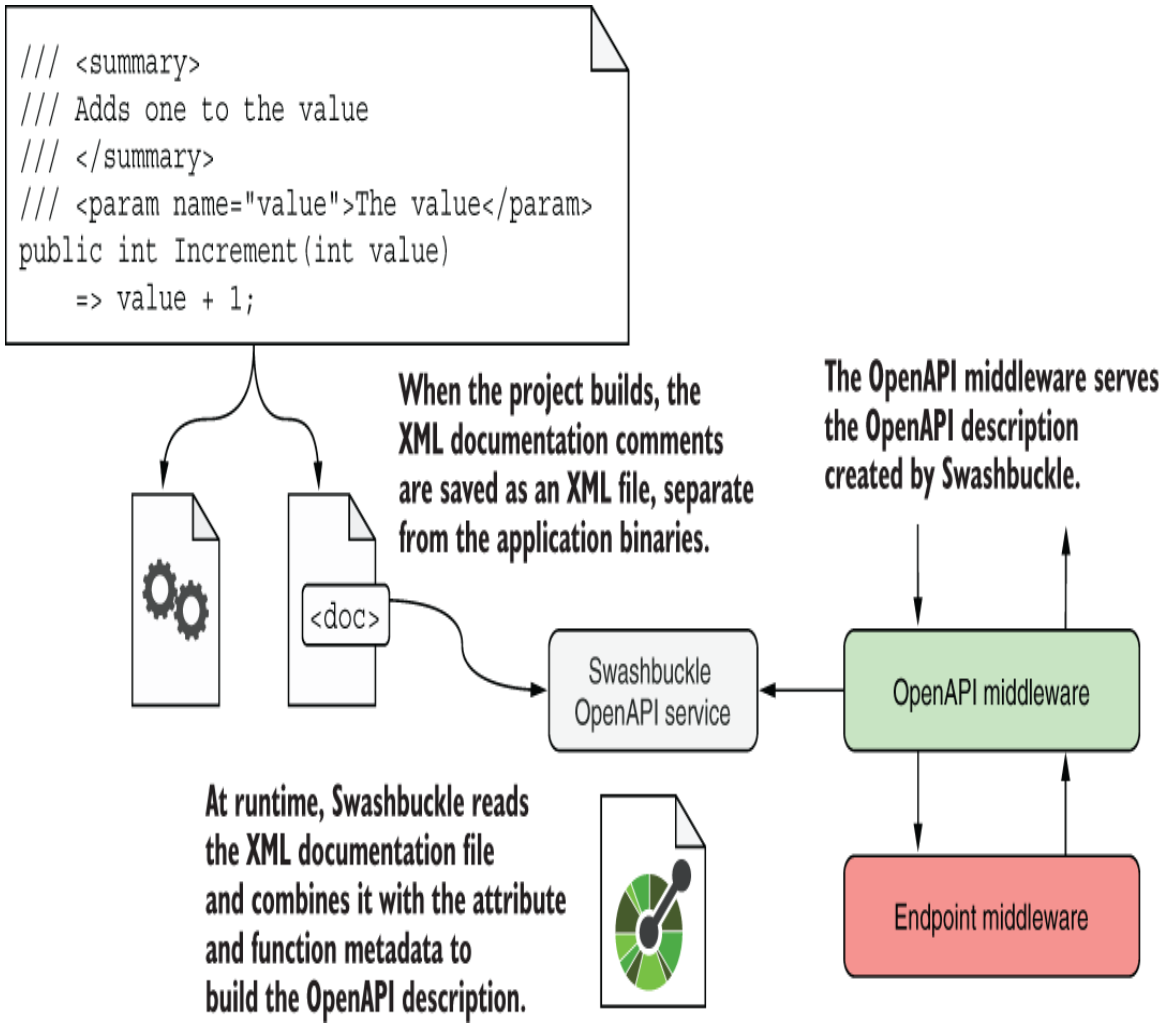

Figure 11.11 You can configure a .NET application to export documentation comments to a dedicated XML file when it builds. Swashbuckle reads this documentation file at runtime, combining it with the attribute and fluent method metadata for an endpoint to generate the final OpenAPI description.

To enable XML documentation comment extraction for your OpenAPI description document you must do three things:
