1. Enable documentation generation for your project. Add the `<GenerateDocumentationFile>` inside a `<PropertyGroup>` in your csproj file, and set it to `true`:

```
<PropertyGroup>
  <GenerateDocumentationFile>true</GenerateDocumentationFile>
</PropertyGroup>
```

2. Configure Swashbuckle to read the generated XML document in `SwaggerGen()`:

```
builder.Services.AddSwaggerGen(opts =>
{
    var file = $"{Assembly.GetExecutingAssembly().GetName().Name}.xml";
    opts.IncludeXmlComments(
    Path.Combine(AppContext.BaseDirectory, file));
});
```
