

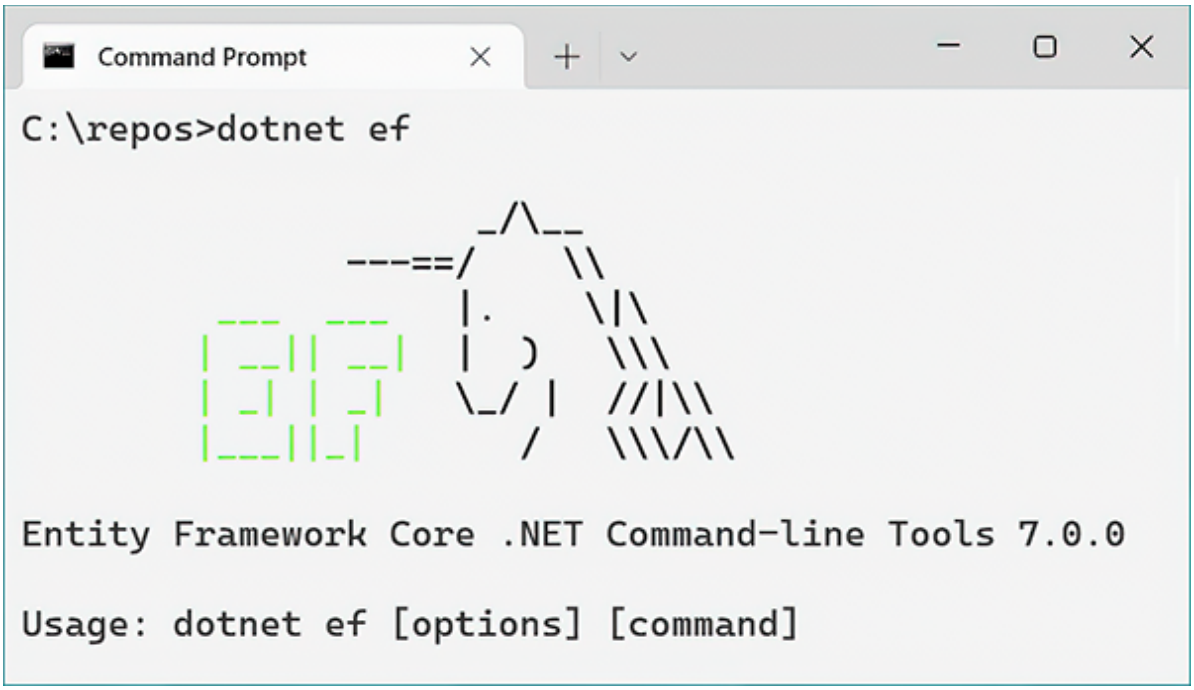

Figure 12.6 Running the `dotnet ef` command to check that the .NET EF Core tools are installed correctly

TIP If you get the `No executable found matching command 'dotnet-ef'` message when running the preceding command, make sure that you installed the global tool by using `dotnet tool install --global dotnet-ef`. In general, you need to run the `dotnet ef` tools from the project folder in which you registered your `AppDbContext`—not from the solution-folder level.

With the tools installed and your database context configured, you can create your first migration by running the following command from inside your web project folder and providing a name for the migration (in this case, `InitialSchema`):

```
dotnet ef migrations add InitialSchema
```
