to the `Recipe` entity. The interaction with the `AppDbContext` consists of only two methods: `Add()` and `SaveChangesAsync()`.

Listing 12.6 Creating a `Recipe` entity in the database in `RecipeService`

```
readonly AppDbContext _context;                                    ❶
public async Task<int> CreateRecipe(CreateRecipeCommand cmd)       ❷
{
    var recipe = new Recipe                                        ❸
    {                                                              ❸
        Name = cmd.Name,                                           ❸
        TimeToCook = new TimeSpan(                                 ❸
            cmd.TimeToCookHrs, cmd.TimeToCookMins, 0),             ❸
        Method = cmd.Method,                                       ❸
        IsVegetarian = cmd.IsVegetarian,                           ❸
        IsVegan = cmd.IsVegan,                                     ❸
        Ingredients = cmd.Ingredients.Select(i =>                  ❸
        new Ingredient                                             ❹
        {                                                          ❹
            Name = i.Name,                                         ❹
            Quantity = i.Quantity,                                 ❹
            Unit = i.Unit,                                         ❹
        }).ToList()                                                ❹
    };
    _context.Add(recipe);                                          ❺
    await _context.SaveChangesAsync();                             ❻
    return recipe.RecipeId;                                        ❼
}
```

❶ An instance of the AppDbContext is injected in the class constructor using DI.

❷ CreateRecipeCommand is passed in from the endpoint handler.

❸ Creates a Recipe by mapping from the command object to the Recipe entity

❹ Maps each CreateIngredientCommand onto an Ingredient entity

❺ Tells EF Core to track the new entities

❻ Tells EF Core to write the entities to the database; uses the async version of the command

❼ EF Core populates the RecipeId field on your new Recipe when it’s saved.
