

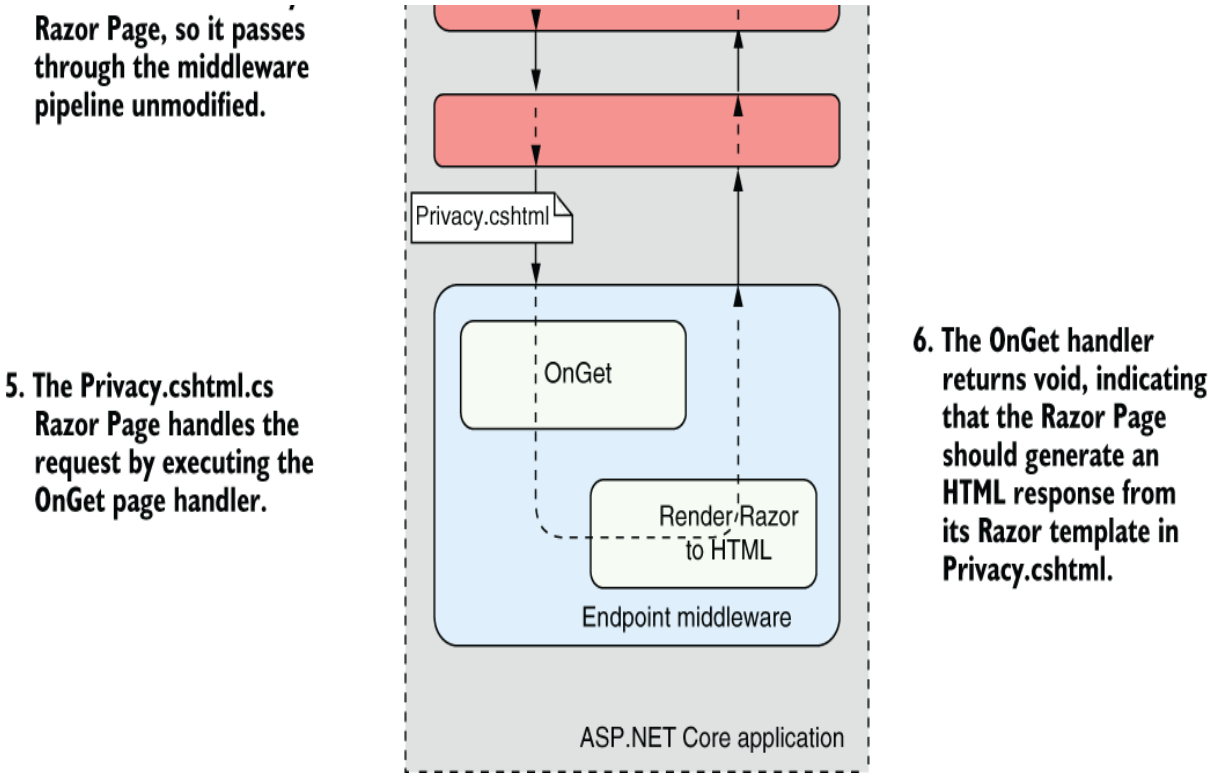

Figure 13.6 An overview of a request to the `/Privacy` URL for the sample ASP.NET Razor Pages application. The routing middleware routes the request to the `OnGet` handler of the Privacy.cshtml.cs Razor Page. The Razor Page generates an HTML response by executing the Razor template in Privacy.cshtml and passes the response back through the middleware pipeline to the browser.

We've reached the end of this section working through the template, so you have a good overview of how an entire Razor Pages application is configured and how it handles a request using Razor Pages. In section 13.2 we take the basic Razor Pages in the default template a bit further, looking at a more complex example.

13.2 Exploring a typical Razor Page
