Razor Page handles different aspects of a request, all of which combine to generate the final response.

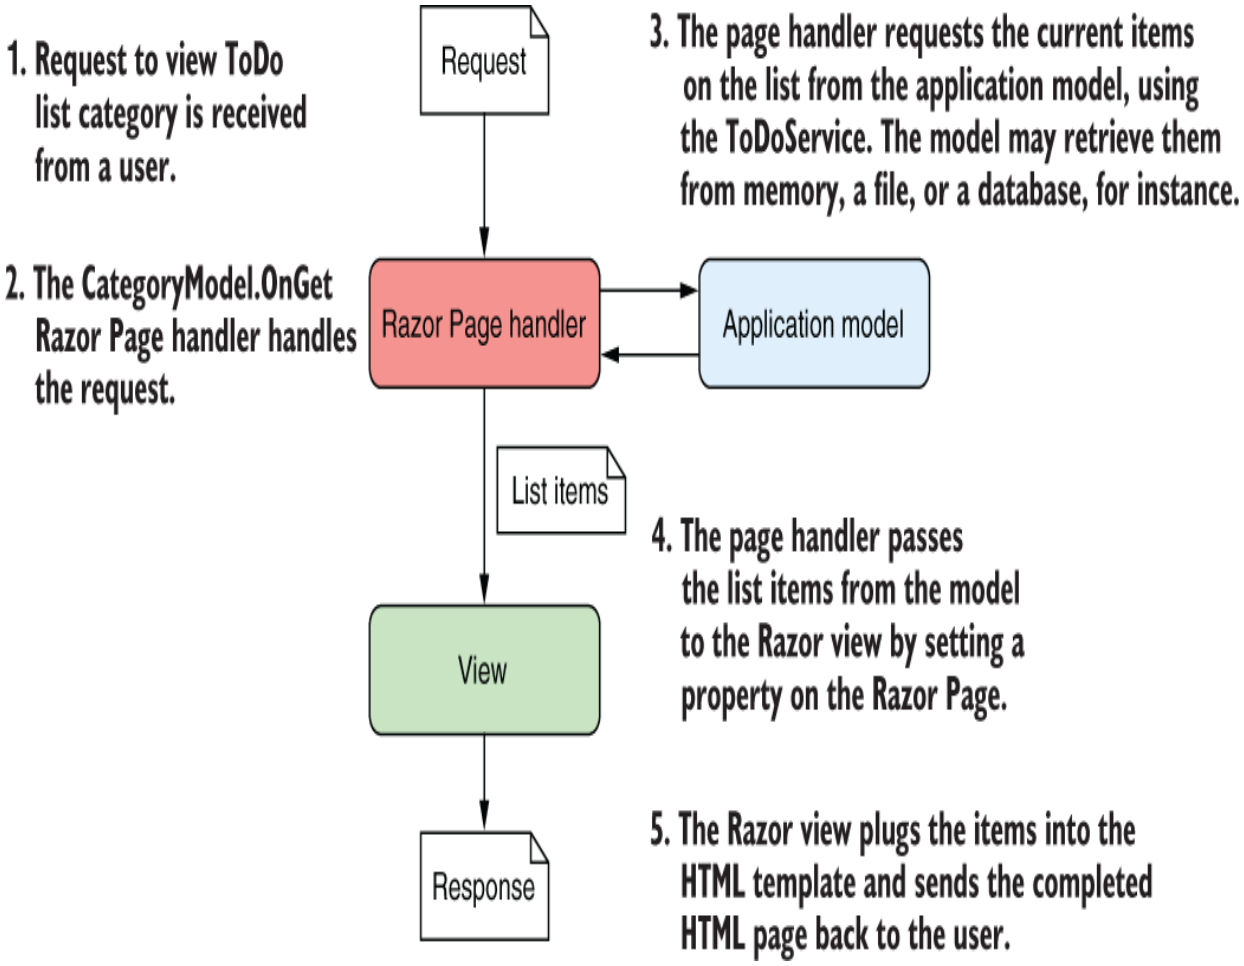

Figure 13.7 Requesting a to-do list page for a Razor Pages application. A different component handles each aspect of the request.

In general, three components make up the MVC design pattern:

- *Model*—The data that needs to be displayed—the global state of the application. It's accessed via the `ToDoService` in listing 13.5.
