
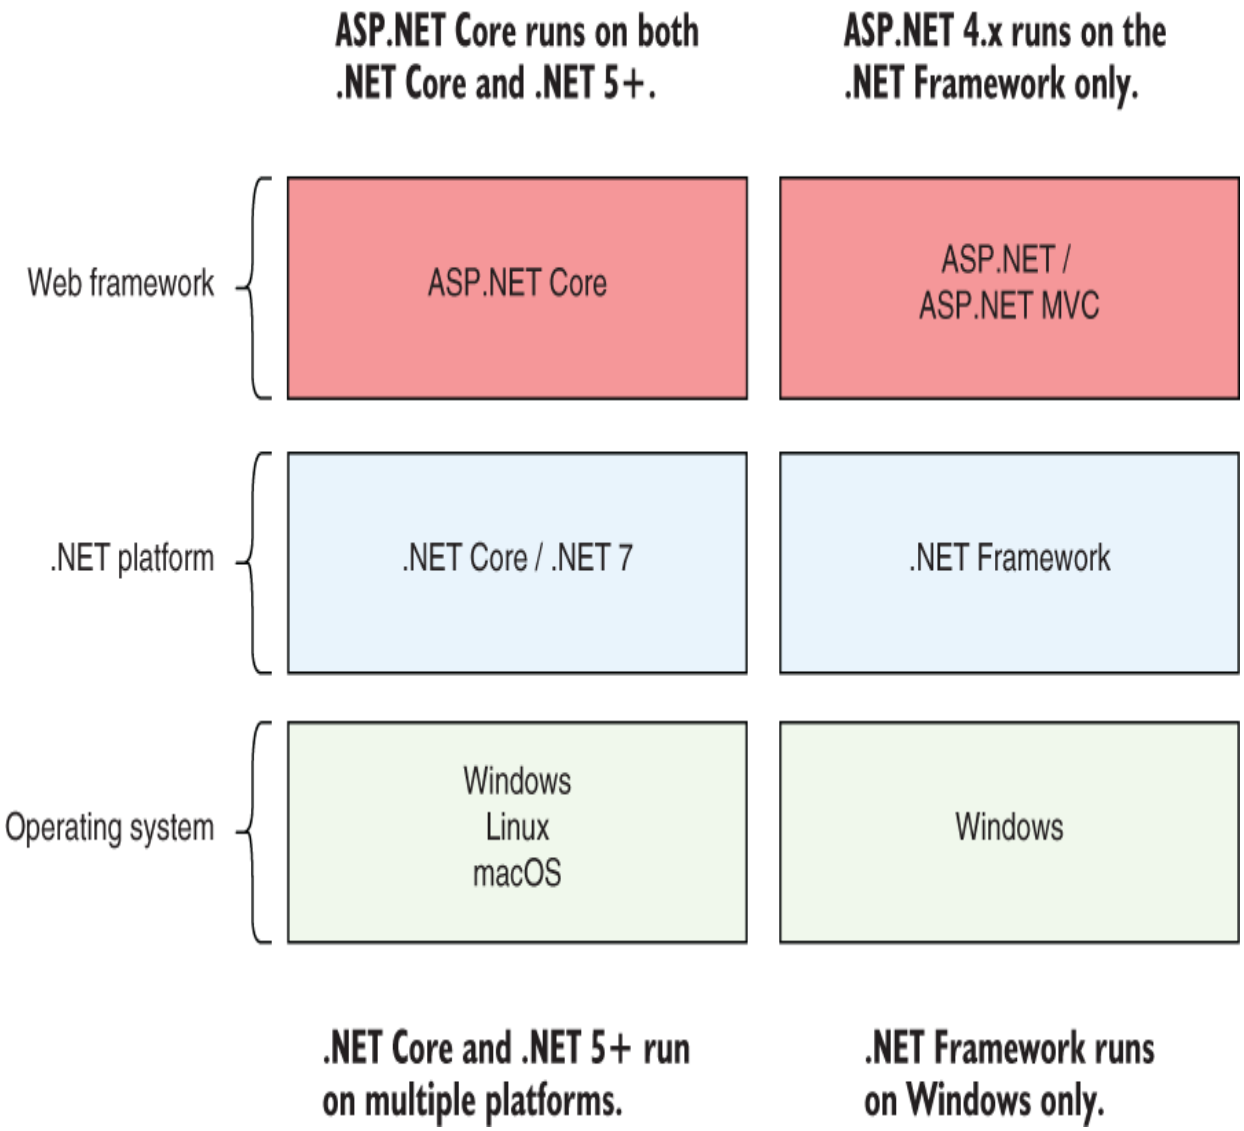

Figure 2.2 The relationships among ASP.NET Core, ASP.NET, .NET Core/.NET 5+, and .NET Framework. ASP.NET Core runs on .NET Core and .NET 5+, so it can run cross-platform. Conversely, ASP.NET runs on .NET Framework only, so it's tied to the Windows OS.

DEFINITION .NET 5 was the next version of .NET Core after 3.1, followed by .NET 6 and .NET 7. It represents a unification of .NET Core and other .NET platforms in a single runtime and framework. It was considered to be the future of .NET, which is why Microsoft chose to drop the "Core" from its name. For consistency with Microsoft's language, I use
