- `/products/bags/white-rucksack`
- `/products/shoes/black-size9`
- `/Products/phones/iPhoneX`

NOTE You can use the same routing features you learned about in chapter 6 with Razor Pages, including optional parameters, default parameters, and constraints.

It's common to add route segments to the Razor Page template like this, but what if that's not enough? Maybe you don't want to have the `/products` segment at the start of the preceding URLs, or you want to use a completely custom URL for a page. Luckily, that's just as easy to achieve.

14.4.2 Replacing a Razor Page route template completely

You'll be most productive working with Razor Pages if you can stick to the default routing conventions where possible, adding extra segments for route parameters where necessary. But sometimes you need more control. That's often the case for important pages in your application, such as the checkout page for an e-commerce application or even product pages, as you saw in the previous section.

To specify a custom route for a Razor Page, prefix the route with `/` in the `@page` directive. To remove the `"product/"` prefix from the route templates in section 14.4.1, use this directive:

```
@page "/{category}/{name}"
```
