great user experience, but it demonstrates that the error codes are being intercepted correctly.

A more typical approach to using `StatusCodePagesMiddleware` in production is to reexecute the pipeline when an error is captured, using a similar technique to the `ExceptionHandlerMiddleware`. This allows you to have dynamic error pages that fit with the rest of your application. To use this technique, replace the call to `UseStatusCodePages` with the following extension method:

```
app.UseStatusCodePagesWithReExecute("/{0}");
```

This extension method configures `StatusCodePagesMiddleware` to reexecute the pipeline whenever a `4xx` or `5xx` response code is found, using the provided error handling path. This is similar to the way `ExceptionHandlerMiddleware` reexecutes the pipeline, as shown in figure 15.6.
