

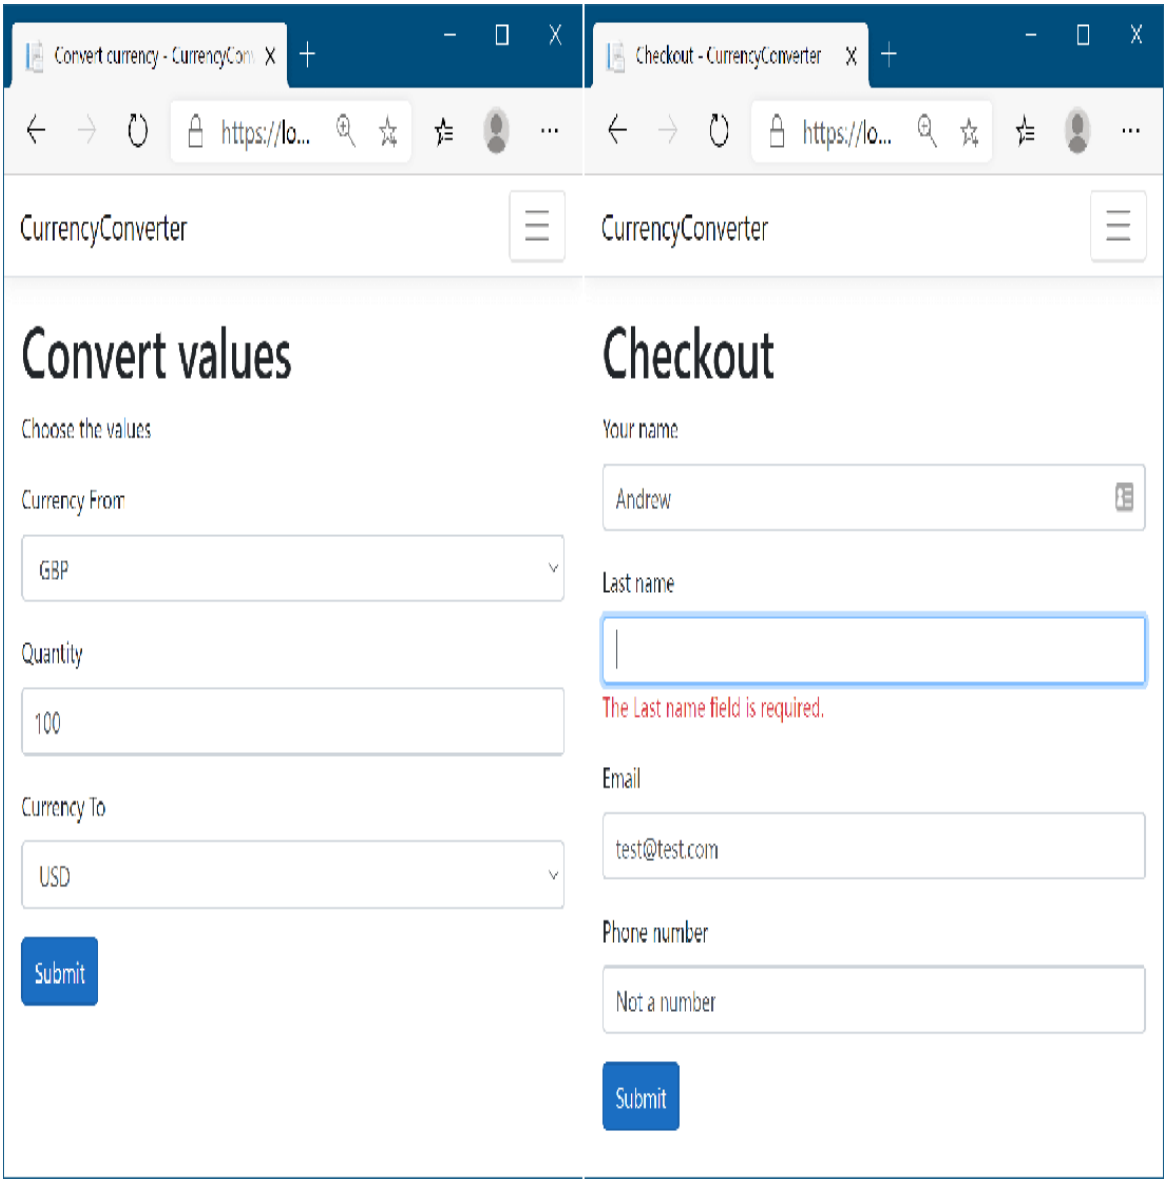

Figure 18.1 The currency converter application forms, built using Tag Helpers. The labels, drop-down lists, input elements, and validation messages are all generated using Tag Helpers.

As you develop the application, you'll meet the most common Tag Helpers you'll encounter when working with forms. You'll also see how you can use Tag Helpers to simplify other common tasks, such as generating links, conditionally displaying data in your application, and ensuring that users see the latest version of an image file when they refresh their browser.
