implementation. Alternatively, if you wrote a new ASP.NET Core web server, you could use it in place of Kestrel without needing to change anything else about your application.

Another benefit of a reverse proxy is that it can be hardened against potential threats from the public internet. Reverse proxies are often responsible for additional aspects, such as restarting a process that has crashed. Kestrel can remain a simple HTTP server, not having to worry about these extra features, when it's used behind a reverse proxy. You can think of this approach as being a simple separation of concerns: Kestrel is concerned with generating HTTP responses, whereas the reverse proxy is concerned with handling the connection to the internet.
