page handler is executed. These attributes are also used by the Razor templating language to provide the metadata required to generate the correct HTML when you use Tag Helpers.

You can use the pattern I described in chapter 16, exposing a `UserBindindModel` as an `Input` property of your `PageModel`, to use the model for both model binding and in your Razor view:

```
public class CheckoutModel: PageModel
{
    [BindProperty]
    public UserBindingModel Input { get; set; }
}
```

With the help of the `UserBindingModel` property, Tag Helpers, and a little HTML, you can create a Razor view that lets the user enter their details, as shown in figure 18.4.
