

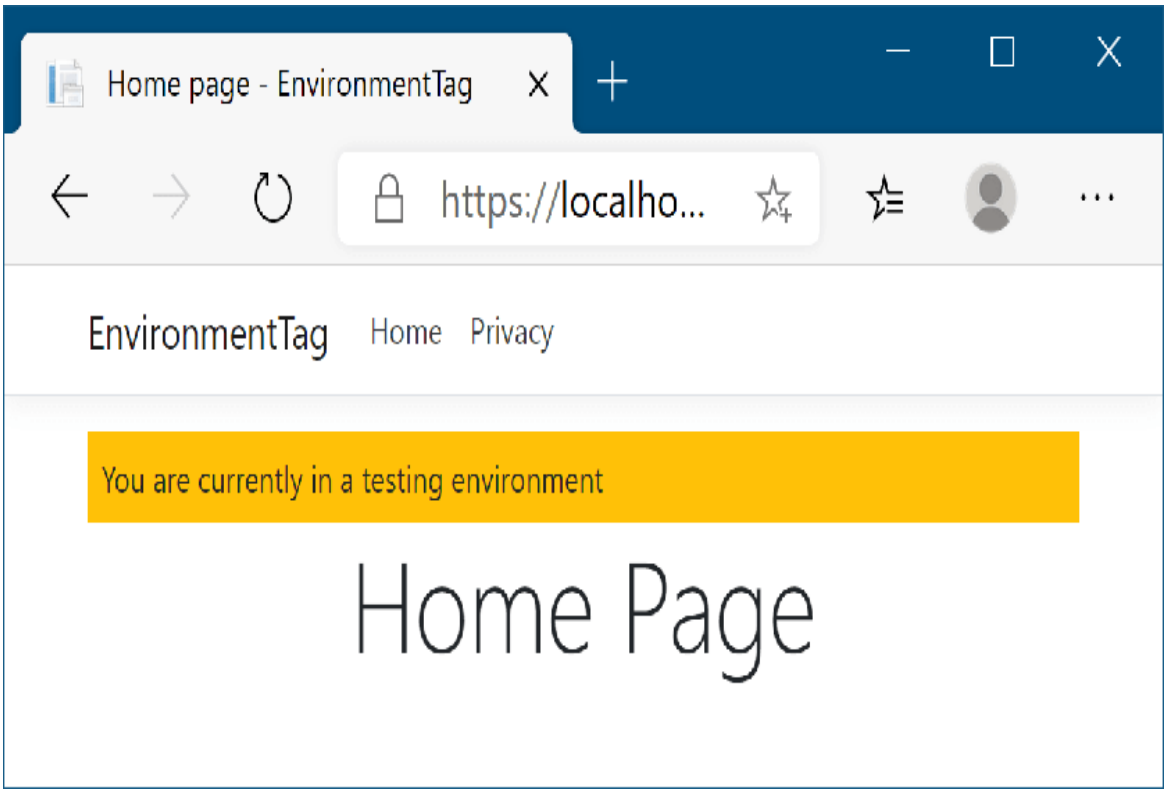

Figure 18.11 The warning banner will be shown whenever you're running in a testing environment, to make it easy to distinguish from production.

You've already seen how to use C# to add `if` statements to your markup, so it would be perfectly possible to use this technique to add an extra `div` to your markup when the current environment has a given value. If we assume that the `env` variable contains the current environment, you could use something like this:

```
@if(env == "Testing" || env == "Staging")
{
    <div class="warning">You are currently on a testing environment</div>
}
```

There's nothing wrong with this, but a better approach would be to use the Tag Helper paradigm to keep your markup clean and easy to read. Luckily, ASP.NET Core comes with the `EnvironmentTagHelper`, which can be used to achieve the same result in a slightly clearer way:
