Consequently, even if you're building an application that consists entirely of web APIs, using no server-side rendering of HTML, the MVC design pattern still applies. Whether you're building traditional web applications or web APIs, you can structure your application virtually identically.

By now I hope you're nicely familiar with how ASP.NET Core handles a request. But in case you're not, figure 20.5 shows how the framework handles a typical Razor Pages request after it passes through the middleware pipeline. This example shows how a request to view the available fruit on a traditional grocery store website might look.
