

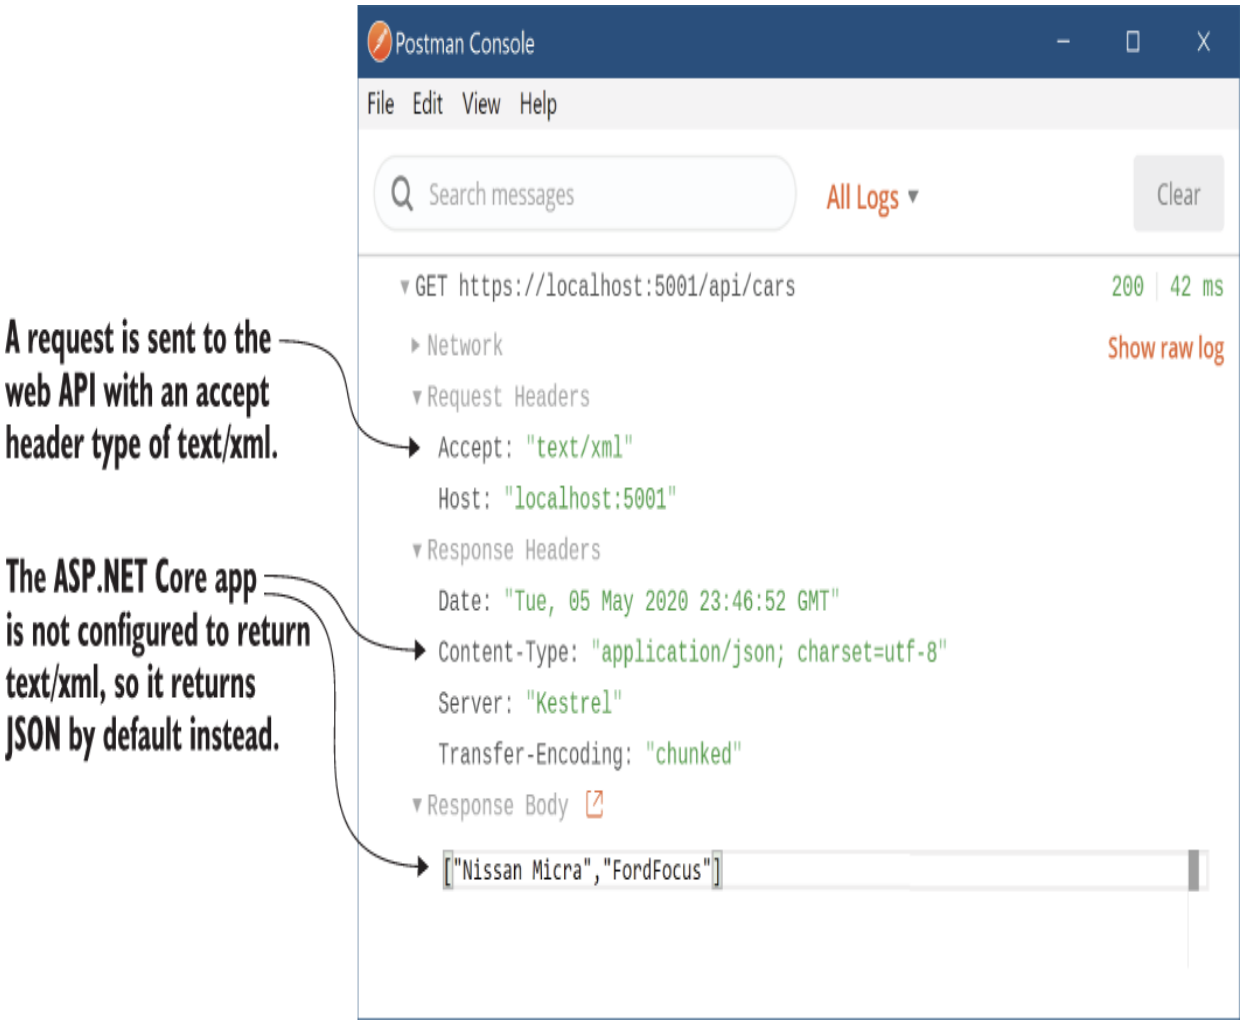

Figure 20.7 Even though the request was made with an `Accept` header of `text/xml`, the response returned was JSON, as the server was not configured to return XML.

WARNING In legacy ASP.NET, objects were serialized to JSON using PascalCase, where properties start with a capital letter. In ASP.NET Core, objects are serialized using camelCase by default, where properties start with a lowercase letter.

However the data is sent, it's serialized by an `IOutputFormatter` implementation. ASP.NET Core ships with a limited number of output
