chance of subtle mistakes such as making a policy too broad or too narrow.

9.3.2 Owner can do all

This policy grants owners broad rights—view, edit, and share—over their own documents:

```
permit(
    principal in ACME::Employee,
    action in [ACME:: Action::"doc:view",
   ACME:: Action::"doc:edit",
ACME:: Action::"doc:share"],
    resource in ACME::Document
)
when { resource.owner == principal };
```

Here, the schema restricts the action list, so adding a new action like `doc:delete` later won't automatically give the owner extra permissions.

9.3.3 Manager of owner can view and edit

This rule permits a document owner's manager to view and edit the document, supporting common supervisory workflows:

```
permit(
    principal in ACME::Employee,
    action in [ACME::Action::"doc:view", ACME::Action::"doc:edit"],
    resource in ACME::Document
)
when { resource.owner.manager == principal };
```

The relationship traversal from `resource.owner` to `manager` functions because the schema designates `manager` as an `Employee` attribute.
