ACME’s global rules while still allowing each tenant to control its own sharing relationships.

Figure 13.1 illustrates how ACME’s authorization model developed as the Customer Collaboration platform transformed into the multi-tenant Customer Collaboration Cloud (C³).

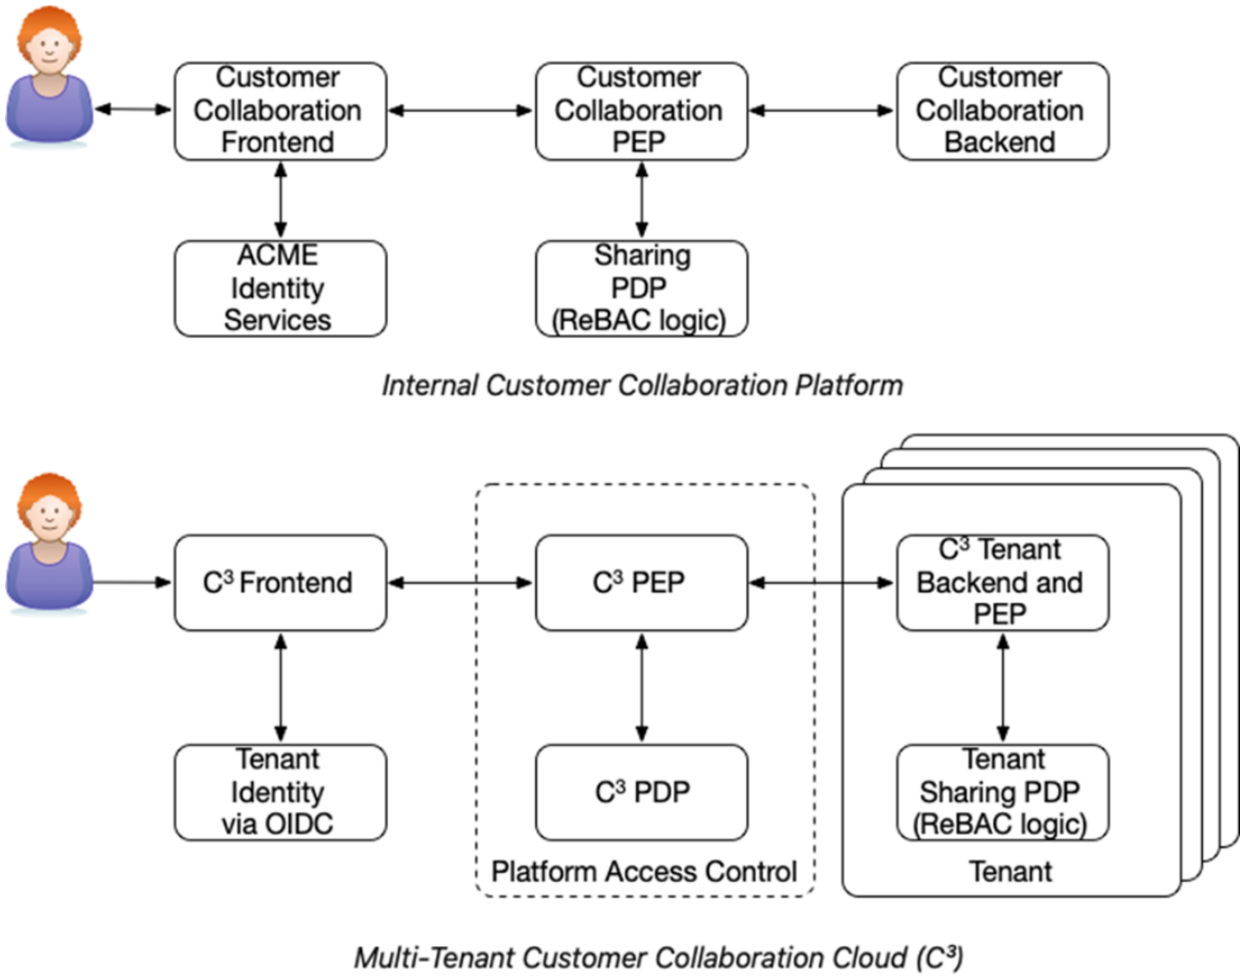

Figure 13.1 Evolution of the Customer Collaboration platform: The internal Customer Collaboration Platform (top) is compared with the multi-tenant Customer Collaboration Cloud (C³) (bottom).

The upper diagram depicts the original single-tenant setup: one identity source, embedded authorization checks, and an in-app ReBAC engine. The lower diagram shows how C³ divides responsibilities into two layers of policy evaluation. A centralized C³ PDP manages platform access control, while each tenant’s Sharing PDP evaluates ReBAC policies within its own workspace.
