

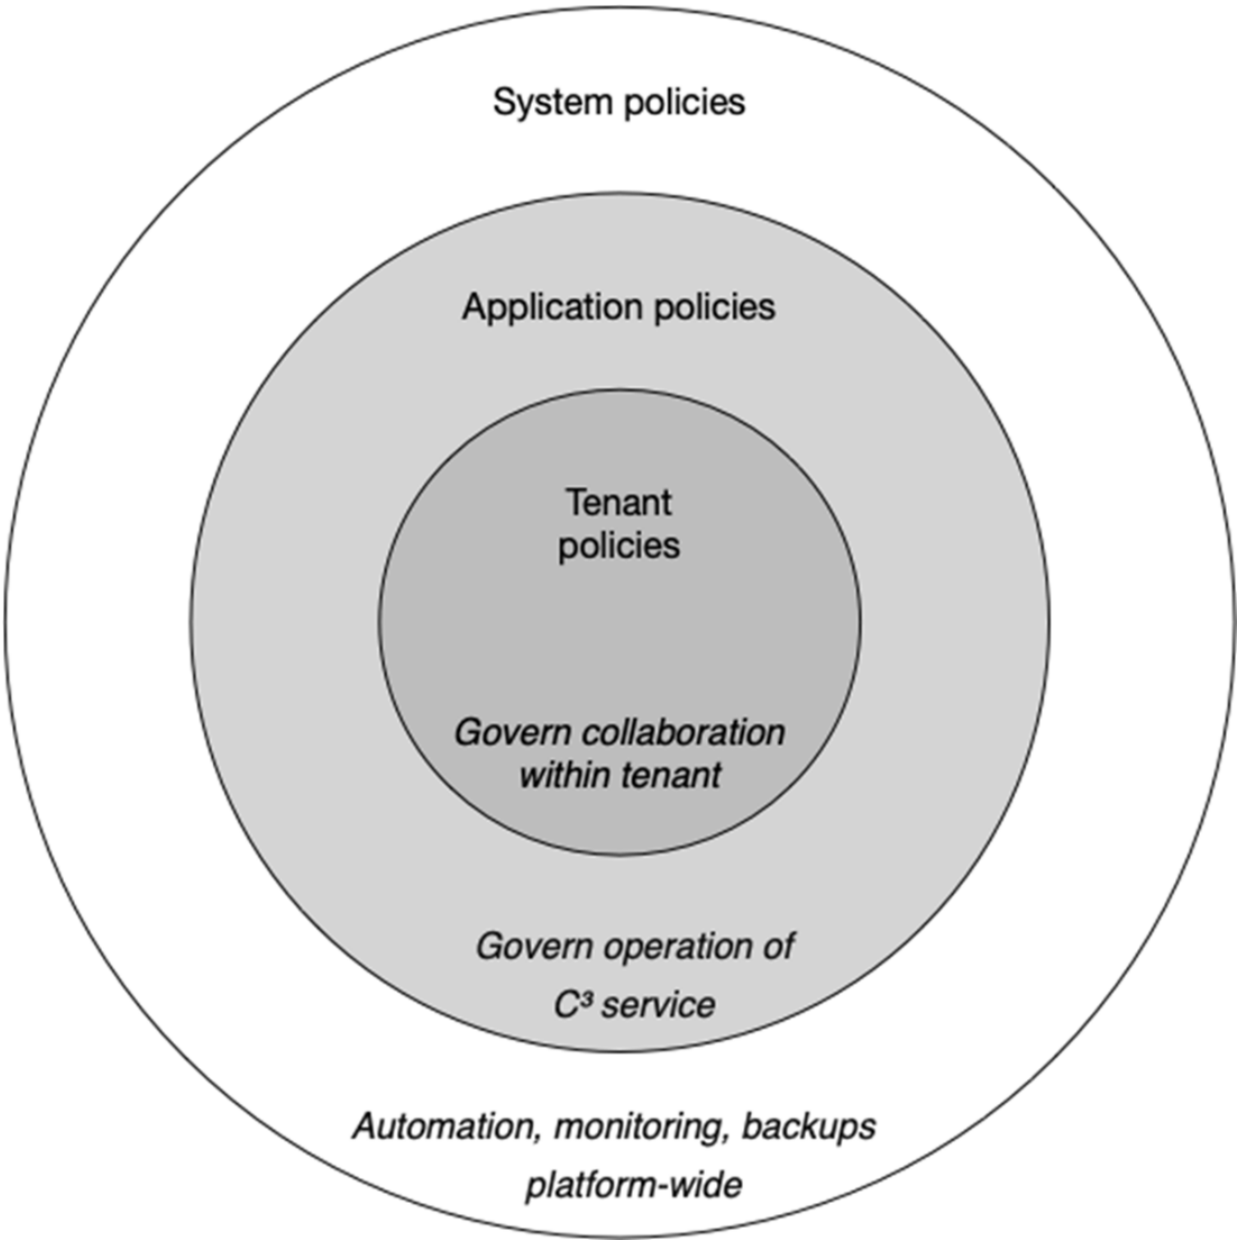

Figure 13.3 Concentric policy layers in the C³ authorization model. Policies in C³ are organized by scope rather than hierarchy. System policies form the outermost layer, overseeing the entire platform and its automation. Inside this layer, application policies govern the Customer Collaboration Cloud service itself, managing multi-tenant governance, data residency, and compliance. At their core, tenant policies handle collaboration within each tenant's workspace using ReBAC and approved templates.

The layers are evaluated from the outside in. System policies set the widest trust boundary, application policies restrict how C³ functions as a service, and tenant policies oversee collaboration within those boundaries:
