

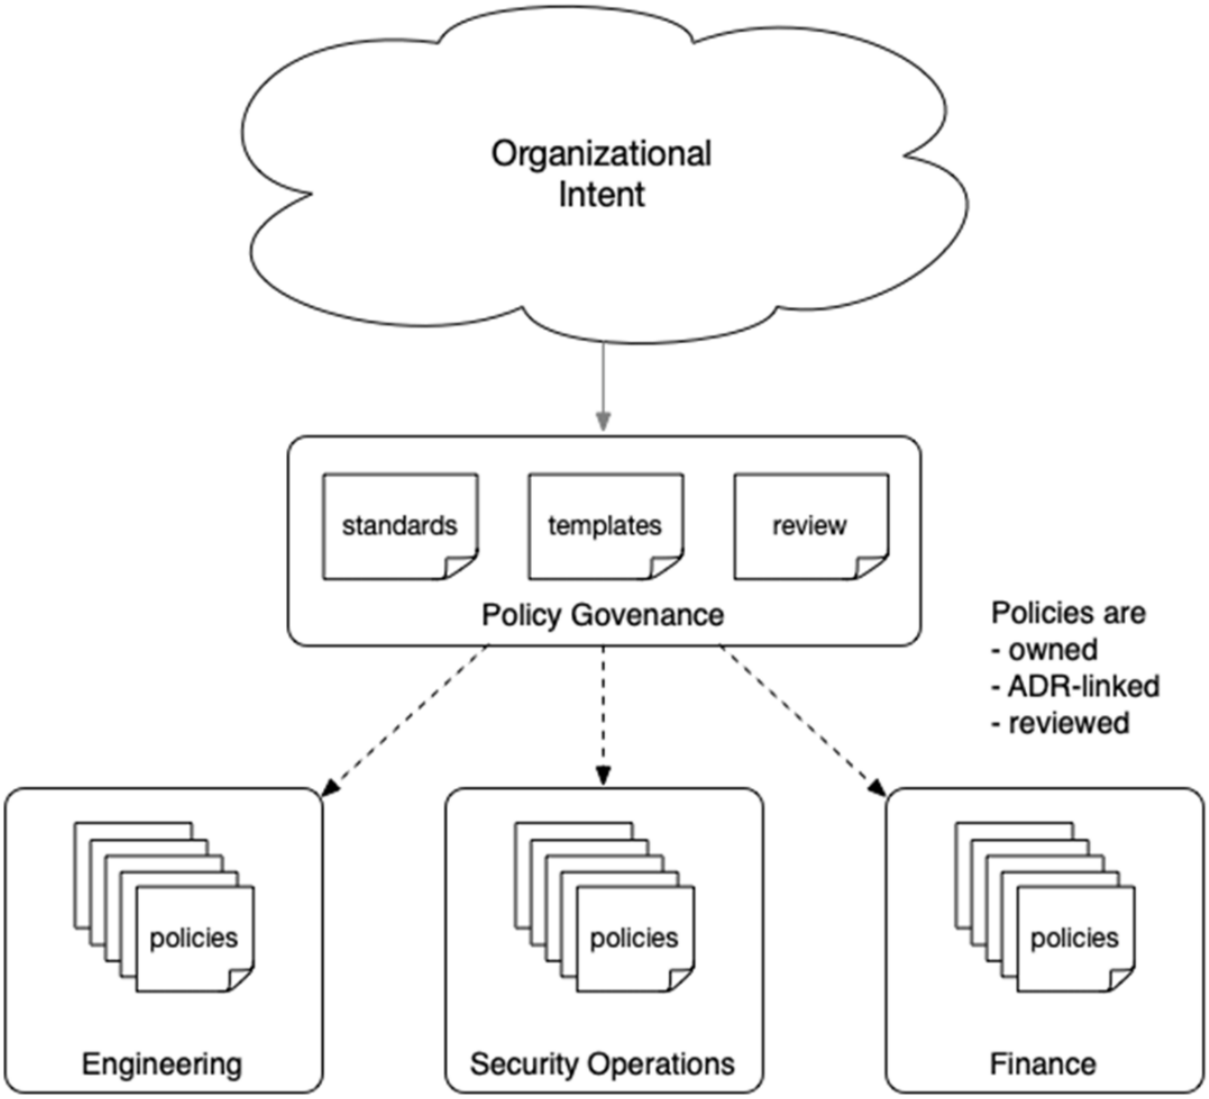

Figure 14.4 Federated policy governance restoring alignment. Policy governance sits between organizational intent and team-owned policies, providing shared standards, templates, and review without centralizing control. Individual teams retain ownership of their policies, while governance ensures that those policies are reviewed, ADR-linked, and aligned with institutional intent.

Each team manages its own policies through the shared lifecycle: drafting new rules, running automated tests, and submitting updates for review. The central governance group acts as a coordinator rather than a gatekeeper, establishing conventions, resolving conflicts, and maintaining transparency across the system.

This structure relies on several key mechanisms:
