

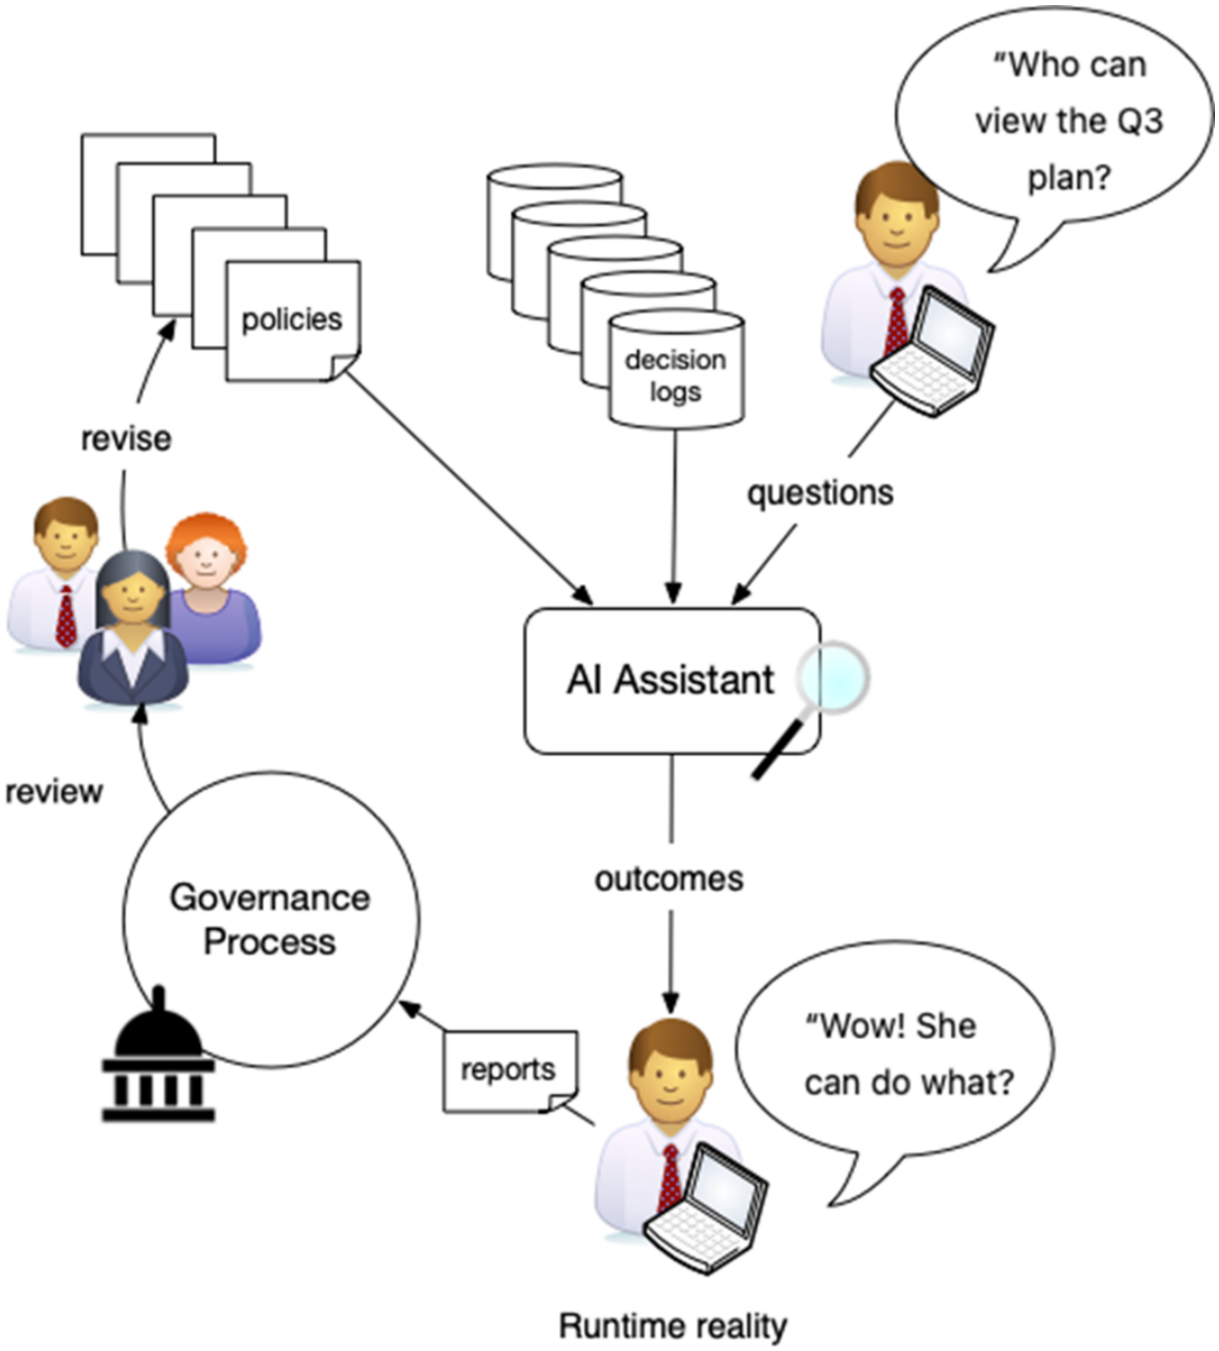

Figure 17.5 Runtime analysis and governance loop. Authorization outcomes captured in decision logs are analyzed with AI assistance and surfaced as questions, patterns, and reports. These insights feed into governance processes, where humans interpret the evidence and decide whether policy changes are needed. The flow makes authorization behavior observable and actionable without placing AI in the enforcement path.

On the right side of the figure, authorization outcomes are recorded in decision logs, analyzed with AI support, and fed into governance processes, which, in turn, affect policies. This section elaborates on that flow. It
